About the Conference

The Intellectual Property Rights (IPRs) refer to the legal privileges granted to the inventor or researcher or creator to safeguard their work for a predetermined amount of time. Protection of intellectual property is essential for promoting innovation. Without intellectual property protection, companies and individuals would not get full profit from their creations and would devote less time to R&D. These legal rights allow the inventor or researcher or creator, or his assignee, the sole right to fully exploit their idea or creativity for a specific amount of time. The right to benefit from the protection of moral and material interests stemming from the authorship of scientific, literary, or creative achievements is defined in Article 27 of the Universal Declaration of Human Rights.

All nations may realize intellectual property's potential as a driver of economic progress, social and cultural well-being with the aid of an effective and equitable intellectual property system that provides a setting in which innovation and creativity can flourish, to the benefit of all, balancing the interests of innovators and the general public.

The result of someone's intelligence, creativity, labour and talent is their intellectual property. Therefore, building an atmosphere that encourages creativity and innovation in the nation depends on IPR understanding. The four primary intellectual property rights categories are patents, trademarks, copyrights and designs. So, along with these basic elements of IPRs and associated rights, geographical indications and industrial designs are all covered for discussion during this planned conference. The some of the issues to be discussed during conference are regarding IPR laws in cyberspace, copyright, trademarks, patenting of traditional knowledge bases, plagiarism and research ethics.

Sub-theme of the conferences:

1. Intellectual Property (IP)
2. Intellectual Property Rights (IPRs)
3. Promotion and Protection of IP
4. Copyrights
5. Trademarks
6. Patents
7. Industrial Designs
8. Research Ethics
9. Plagiarism
